

ABSTRACT OF THE DISCLOSURE

A wiper spoiler providing more consistent and reliable wiping results is essentially comprised of a front and a rear spoils respectively extending at a certain inclination downwardly from the front and the rear bottom edges of a wiper arm; the front spoil indicating a corrugated form having its front edge curved downwardly, and rear edge provided with multiple slots in various lengths having their edges curved downwardly; the rear spoiler having a lower central part with both ends slightly elevated and its outer edge curved downwardly; pressure created along the front spoiler by the wind escaping from multiple slots to avoid producing wind resistance; and the rear spoiler functioning as a reinforced rib to prevent the wiper arm from deformation to create downward pressure.
